

## Setting up Mailjet email service

When signing up to a new Mailjet account you are presented with firstly these 2 options – choose Developer:

Choose the role that suits you better and start using Mailjet.

The you are again presented with 2 options, choose **SMTP Relay**:

Send your first email Try our API by sending your first test email. Choose the sending method that suits your needs and get started with our platform.	
$\oslash$	Select how you want to integrate Mailjet   API   Use the Mailjet Send API to configure and send emails using POST requests, using languages like PHP; JavaScript, Go, etc.   ShTP relay   Modify your app's SMTP configuration to use Mailjet's SMTP relay to send emails. For users who have an existing emailing solution.   Contisue
$\bigcirc$	Configure

Now you receive your Credentials for your account copy each (**Username**, **Password**) and paste them in webCRM:

Click Save. You are now setup and can send emails in webCRM.
